SUMMARY

Frontend engineer with 2+ years of experience shipping production web applications with React.js, Next.js, TypeScript, and Node.js. Proven across B2B SaaS, courier tech, and fintech, building scalable component systems, integrating Firebase/Supabase backends, and turning Figma designs into polished, accessible, high-performance interfaces. Comfortable owning features end-to-end while collaborating across product, design, and backend teams.

EXPERIENCE

Frontend Engineer — Traytic (*Remote*) | Jul 2026 – August-2026

Platform: "GodMode" — an operating system for hosting agencies across Africa (traytic.com)

- Built core admin screens with Next.js 16 (App Router), React 19, TypeScript, and Tailwind CSS v4: an analytics overview with revenue/agency/growth metrics and Recharts visualizations, Plans & Add-ons management, and an Agencies workspace.
- Implemented Plans & Add-ons management with sortable, searchable, paginated tables, trial/grace-period lifecycle configuration, and lock / deactivate / restore / rename actions with confirmation flows.
- Built the Agencies workspace with status filters, debounced search, CSV bulk import, and admin actions (suspend, terminate, extend trial, impersonate) backed by typed mutation hooks.
- Shipped the end-to-end authentication experience — sign-in, sign-up, password reset, email verification, and TOTP — with Zod validation, a password-strength indicator, international phone input, and Cloudflare Turnstile bot protection.
- Contributed to the Traytic design system (design tokens, shadcn/Base UI primitives, GSAP + Motion animation) and enforced accessibility and responsiveness across every screen.
- Collaborated with backend engineers, designers, and product in a small cross-functional team using a Git feature-branch workflow with pull requests on GitHub.

Lead Frontend Engineer — Starrik(*Remote*) | September 2024 – December(2025)

Logistic company (starrik.com)

- Lead front-end development of a courier-tech platform, built a modern delivery platform with real-time order tracking and vendor dashboards using React.js.
- Integrate Firebase (Auth, Firestore, Storage) as a backend-as-a-service for real-time data and file storage, partnering with backend engineers on API design and enforcing coding best practices.

Frontend Developer — Roothub, Uyo, Akwa Ibom

December 2024 – 2025

- Completed a web development program focused on building scalable, production-ready websites..
- Collaborated with developers and UI/UX designers to ship user-friendly interfaces, debugging and resolving front-end issues to improve overall user satisfaction.

Frontend Engineer — Churchera(Remote) | January 2026 - present

Digital Finance & Church Management Ecosystem (churchera.com)

- Engineered a high-fidelity FaithTech platform facilitating seamless tithing, offerings, and donations for global congregations.
- Developed responsive web interfaces for desktop and mobile using Next.js and TailwindCSS, with efficient state management via Zustand.
- Designed a secure role-based access control (RBAC) architecture for Admin and Member dashboards, ensuring data privacy for sensitive financial records.
- Leveraged Supabase for real-time transaction tracking and database management.

PROJECTS

QuizManiac — *Interactive Quiz Application*

- Developed a responsive quiz app with multiple categories using React + Vite, integrated with Firebase for auth, storage, and leaderboards.
- Optimized performance and UI responsiveness for seamless use across desktop and mobile devices.

HustleLoop — *Ecommerce Marketplace & Affiliate Platform*

- Collaborated with a team to build a mobile-first, responsive marketplace architecture using React.js/Vite and TailwindCSS, enabling seamless browsing and purchasing of digital products with optimized search and filtering.
- Contributed to integration of a payment interface across multiple gateways including Paystack and Etegram, enabling real-time financial transparency and expanded purchasing options.
- Played a key role in building a Referral Dashboard featuring dynamic commission tracking and link generation, contributing to organic user growth and increased platform traffic.
- Supported implementation of secure KYC onboarding flows using modern validation patterns, ensuring merchants and affiliates meet platform trust requirements prior to withdrawal processing.

SKILLS

- **Frontend:** React.js, Next.js, TypeScript, Vite, Redux, Zustand, Context API, TanStack Query
- **Styling:** TailwindCSS, CSS3, HeadlessUI, ShadCN
- **Backend & Database:** Node.js, Firebase, REST APIs, Firestore, Supabase
- **Tools:** Git/GitHub, pnpm, Postman, Figma, VS Code
- **Inclusive Design:** Responsive Web Design, Accessibility-Focused Development

EDUCATION

University of Uyo, Uyo, Akwa Ibom — BSc. Computer Science

January 2024 – August 2028 (Expected)

GPA: 4.8/5.0

Coursework: Data Structures & Algorithms, Software Engineering, Web Development, Database Systems, Computer Networks.

Shammah College, Uyo, Akwa Ibom — SSCE

September 2017 – September 2023

LANGUAGES

- **English:** Professional Proficiency
- **Ibibio:** Native
